

Discription

The PSM712 protects sensitive semiconductor components from damage or upset due to electrostatic discharge (ESD) and other voltage induced transient events. Excellent clamping capability, low leakage, low capacitance, and fast response time provide best in class protection on designs that are exposed to ESD. It gives designer the flexibility to protect one bi-directional line in applications where arrays are not practical.

SOT-23

Features

- ★ Low capacitance.
- ★ Low clamping voltage.
- ★ ESD protection
- ★ Complies with IEC 61000-4-2 standards: Air discharge: $\pm 30\text{kV}$
Contact discharge: $\pm 30\text{kV}$
- ★ We declare that the material of product compliance with RoHS requirements and Halogen Free.
